

Anson Chu

Research Infrastructure & Production Engineering Leader

San Francisco, CA | anson.ch@gmail.com | linkedin.com/in/chuanson | ansonchu.com

SUMMARY

Build platforms and organizations that turn cutting-edge research into reliable production systems in complex technical domains, from quant finance to semiconductor manufacturing.

EXPERIENCE

fab2 · Lead, Fab Software

Jun 2024 – Present

- Operationalized semiconductor process research into production-ready manufacturing through a **software-defined fab** platform, with hundreds of tools running 24×7.
- Rapidly developed expertise across embedded systems, process engineering, and manufacturing automation to deliver core systems spanning **firmware through the manufacturing platform**.
- Established observability, testing, and statistical process control systems that enabled dependable operation across software, hardware, and process teams.
- Grew from the second software engineer into leading Fab Software, **hiring and developing staff-level engineers**, setting the engineering roadmap, and helping define the company leveling matrix.

Numerai · CTO

Jan 2018 – Dec 2023

- Operationalized open ML **research from thousands of data scientists** into production trading for a hedge fund that scaled to \$750M AUM.
- Designed **incentive and evaluation mechanisms** that directly aligned tournament scoring and payouts with hedge fund performance while defending against adversarial behavior.
- Architected performant and reliable data, ML, and trading infrastructure, taking us from manual weekly trading to automated daily trading.
- Joined as the third engineer and grew into CTO, building engineering, operations, and finance teams; introducing **OKRs and quarterly strategy planning**; and developing the technical leadership team.

Uber · Senior Software Engineer

Dec 2013 – Dec 2017

- Built Dispatch and Maps systems at Uber, operating **large-scale distributed systems** with deep ownership of reliability, observability, on-call, and incident response.
- Replaced Google Maps with in-house spatial search and prediction, cutting ~\$1M/month; patented wifi-fingerprint positioning ([US 11,709,220](#)).

EDUCATION

University of California, Irvine · B.S., Computer Science and Engineering

2011
