

Anson Chu

Research Infrastructure & Production Engineering Leader

San Francisco, CA | anson.ch@gmail.com | [linkedin.com/in/chuanson](https://www.linkedin.com/in/chuanson) | ansonchu.com

SUMMARY

Build platforms and organizations that turn cutting-edge research into reliable production systems in complex technical domains, from quant finance to semiconductor manufacturing.

EXPERIENCE

fab2 · Lead, Fab Software

Jun 2024 – Present

- Built the platform that transformed **process engineering research into reproducible, production-ready manufacturing**, enabling engineers to author, execute, observe, and scale recipes.
- Rapidly developed expertise across embedded systems, process engineering, and manufacturing automation to deliver core systems spanning firmware through the manufacturing platform.
- Established the operational foundation for the **software-defined fab**, including observability, testing, on-call, and operational tooling across software, hardware, and process teams.
- Lead Fab Software across semiconductor manufacturing, hardware manufacturing, infrastructure, EDA, and AI, prioritizing work across research and engineering teams.
- Hire, coach, and develop multiple **staff-level engineers**; helped define the company leveling matrix and set the engineering roadmap.

Numerai · CTO

Jan 2018 – Dec 2023

- Built the platform for **thousands of external researchers** to contribute production trading signals, operationalizing ML research to production for a hedge fund that scaled to ~\$750M AUM.
- Designed **incentive and evaluation mechanisms** that aligned a global research community with real-world financial outcomes, rewarding genuine signal while defending against adversarial behavior.
- Architected production reliability for a regulated hedge fund, spanning research, ML, and data systems to portfolio optimization, backtesting, and trade execution, with testing, observability, on-call, and incident response throughout.
- Built engineering, operations, and finance teams from the ground up, recruiting, coaching, and developing people who grew into technical and organizational leaders.
- Introduced and ran **OKRs**, wrote quarterly strategy memos, and set priorities across research, product, trading, and infrastructure.

Uber · Senior Software Engineer

Dec 2013 – Dec 2017

- Built Dispatch and Maps systems at Uber, operating **large-scale distributed systems** with deep ownership of reliability, observability, on-call, and incident response.

EDUCATION

University of California, Irvine · B.S., Computer Science and Engineering

2011
